Installation, Lubrication and Maintenance

XL-96

XL Right Angle Reducers and Gearmotors

1/4 to 20 HP
Ratio 5:1 to 336:1

OPTIONS

- Broad range of integral and C-face motors.
- Flanged outputs for direct mounting.
- Bolt-on feet for ceiling or vertical mounting.
- Brake additions.
- XT and E-Z Kleen packages.

DESIGNED FOR YOUR NEEDS

- Three-piece coupling makes NEMA C-face motor removal and assembly easy.
- Cast iron construction is corrosion resistant.
- Optional washdown enclosure.
- Hardened steel seal sleeves protect input and output shafts from seal wear.
- Factory-filled lubricant.
- USDA-approved finish.

The MASTER right angle gear product line is composed of two basic configurations.

- 1. THE GEARMOTOR** - uses a partial motor direct connected to the reducer splined input shaft by means of a semi-rigid coupling.
- 2. THE C-FACE REDUCER** - utilizes a standard C-face motor, adapter and flexible coupling, connecting to the reducer.

Gearing is designed with a steel worm, integral to the splined input shaft, mating with a bronze worm gear. The second stage gears, where used, are helical, cut from steel, shaved to close tolerances and then case hardened.

The single reduction and combination gearmotor is designed with ball bearings on the splined input shafts and tapered roller bearings on intermediate and final output shaft.

Integral Gearmotor Construction for more compactness

XL Parallel Reducers and Gearmotors

OPTIONS:

- Broad range of integral and C-Face motors
- Flanged outputs for direct mounting
- XT and Easy Clean (Level 1 and Level 2) enclosures for severe applications

Contact your Master representative for information on fully assembled systems including motors, brakes, gearboxes, couplings, sprockets, and pulleys.

DESIGNED FOR YOUR NEEDS:

- Three-piece coupled input makes NEMA C-Face motor removal and assembly easy
- Cast iron construction is corrosion resistant.
- Hardened steel seal sleeves protect input and output shafts from seal wear
- Factory-filled with lubricant for the proper mounting position
- USDA-approved finish and lubricants

The **MASTER XL** parallel product line is composed of two basic input configurations;

1. **THE GEARMOTOR** - uses a partial motor direct connected to the reducer splined input shaft by means of a semi-rigid coupling
2. **THE C-FACE REDUCER** - utilizes a standard C-Face motor adapter and flexible coupling, connecting to the reducer.

MASTER XL parallel reducers are available in single, double and triple reduction ratios from 2.25:1 to 129.7:1. Horsepower capabilities range from fractional to 10 HP. These reducers can be mounted using the integral cast foot or by an optional output flange.

APG

MASTER XL

COMBO GEAR

MOTO DRIVE

ULTIMA

PULLEYS

XL Right Angle Gearing

The speed reducer shall be suitable for integral gearmotor construction, readily adaptable for C-face mounting, in either integrally cast feet, output flange, multi-mount, or J-mount configurations, and available with single worm or worm/helical reduction ratios.

The reducer housing and covers shall be constructed of corrosion resistant, class 30 gray iron with cast internal ribbing for added strength. All gear and bearing housings shall be either doweled or tenoned, and precision machined to assure accurate alignment for all gear sets.

The input worm and worm shaft shall be one solid piece and straddle mounted in bearings for rigid and accurate support. The worm shafts shall be either rolled and case carburized, or, milled, case carburized and ground for accuracy and durability.

For combination right angle reducers, the worm gear set shall be located in the first stage of gearing to insure greater efficiency, higher

torque and more quiet operation. Also, the helical gear of the second stage of the combination reducers shall be crown shaved to provide an ellipsoid tooth form to eliminate tooth end bearing, and assure meshing in the strongest tooth area. These gears shall be case carburized to insure high surface durability and resilient tooth core for greater impact resistance and longer service life.

Reducer bearings shall be the tapered roller and ball type and provide a minimum 25,000 hour average life. Output shaft bearings to be rugged roller bearings for high overhung load capability.

All seals shall be of the spring loaded type made of nitrile compound. The input and output oil seals shall ride on accurately machined and plunge ground sleeves to simplify maintenance and reduce shaft replacement.

Reducer gears and bearings shall be splash lubricated. Reducers are to be supplied with a high quality petroleum based lubricant.

XL Parallel Reducers and Gearmotors

The **MASTER XL** speed reducer shall be suitable for integral gearmotor construction, readily adaptable for C-Face motor mounting, in either integrally cast feet or output flange configurations and available in single, double or triple reduction ratios.

The reducer housing and covers shall be constructed of corrosion resistant, class 30 grey iron with cast internal ribbing for added strength. All gear and bearing housings shall be either dowelled or tenoned and precision machined to assure accurate alignment for all gear sets.

All helical gearing shall be crown shaved to provide an ellipsoid tooth form to eliminate tooth end bearing, and assure meshing in the strongest possible tooth area. These gears shall be case carburized to insure high surface durability and resilient tooth core for greater impact resistance and longer service life.

Reducer bearings shall be the tapered roller and ball type and provide a minimum 25,000 hour average life. Output shaft bearings to be rugged roller bearings for high overhung load capability.

All seals shall be of the spring loaded type made of nitrile compound. The input and output oil seals shall ride on accurately machined and plunge ground sleeves to simplify maintenance and reduce shaft replacement.

Reducer gears and bearings shall be splash lubricated. Reducers are supplied with a high quality petroleum based lubricant.

XL Right Angle and Gearmotors

Many of the XL reducers and gearmotors have part numbers that can be found on the selection pages. Refer to the part number when ordering. Always specify a mounting position if other than standard, and any modifications or accessories, if required.

If a part number is not listed on the selection table please provide the following information when placing your order.

1. Motor H.P., frame enclosure, phase, voltage and frequency.
2. Reducer or gearmotor size.
3. Output RPM and gear ratio.
4. Mounting position.
5. Any modifications or accessories.

SELECTION FACTORS

To apply a Reducer or Gearmotor properly, the following facts must be considered:

1. The kind of load, reversing, amount of shock, duty cycle, etc.
2. Type of transmission: direct connected, sprocket and chain, pinion and gear, V-belt, or flat belt.
3. The point of application of the load if over-hung.
4. Possibility of stalling.
5. Retarding torque of Unibrake or other brake.
6. Size of flywheel if used or WK² or inertia effect of the load.
7. Surrounding conditions, normal, dusty, outdoor, hazardous vapor or dust, moisture, or acid or alkali fumes, or abnormal ambient temperatures.
8. Mounting: floor, sidewall, ceiling, vertical or inclined.
9. Electrical characteristics of the motor.
10. Complete duty cycle.
11. Horsepower or torque required.
12. Output shaft rpm.

SELECTION EXAMPLE: A C-face right angle reducer is required to drive a continuous belt conveyor. The prime mover is a 1750 rpm electric motor. The conveyor will see a moderate amount of shock loading. The reducer output shaft must drive the conveyor at approximately 20 rpm. Conveyor load averages 1500 in. lbs. (750 lbs. over 2" radius pulley) and the duty cycle is 24 hours per day.

STEP 1: Reducer Service Factor Table on this page indicates a 1.50 service factor. (Under headings: electric motor, 24 hours per day service and medium load classification). Equivalent load = 1500 in. lbs. $\times 1.50 = 2250$ in. lbs. Ratio is calculated by dividing input speed (1750 rpm) by required output speed (in this case, 20 rpm). $1750 \div 20 = 87.5$ ratio.

STEP 2: To determine minimum HP required refer to the Right Angle Gearmotor tables on pages XL-28 to XL-36. In our example, find the

output torque rating for 86:1 ratio that exceeds our requirement of 1,500 in. lbs. Refer to page XL-30. Note the torque value of 1,766 in. lbs. exceeds our requirement. Also make note of the reducer size... CG16A.

STEP 3: Verify selected reducer is rated for 1.5 Service Factor. As we determined earlier, this will require a torque capability of 2,250 in. lbs. Refer to the rating table for size CM16 reducers on page XL-20. The torque rating for a 86:1 ratio at 1750 RPM is 2,522 in. lbs. which exceeds our requirement.

STEP 4: Select motor frame size and refer to appropriate part number.

STEP 5: If the output shaft is connected by other than a flexible coupling, calculate the OVERHUNG LOAD.

OVERHUNG LOAD

To determine overhung load, divide the torque required by the pitch radius of the sprocket, sheave, etc. and multiply by the appropriate factor as follows:

Chain Drive	1.00	V-Belt	1.50
Synchronous Belt Drive	1.10	Flat Belt	2.50
Spur or Helical Gear	1.25		

The calculated overhung load must not exceed the Output Shaft rating.

For loads acting at more than one shaft diameter from bearing housing, use following conversion factors:

Distance in Shaft Diameters From Brdg. Hsg.	Multiply OHL Capacity By This Factor
1D	1.0
2 D	.65
3 D	.45
4 D	.35
5 D	.30

XL Parallel Reducers and Gearmotors

Selection tables appear on pages XL-66 - XL-84. These tables list maximum input HP, output speeds, ratios, OHL capabilities and output HP.

Many of the XL reducers and gearmotors have part numbers that can be found on the selection pages. Refer to the part number when ordering. Always specify a mounting position if other than standard, and any modifications or accessories, if required.

If a part number is not listed on the selection table, please provide the following information when placing your order:

- Motor HP, frame enclosure, phase/frequency/voltage
- Reducer or gearmotor size
- AGMA class and application
- Output RPM and/or gear ratio
- Mounting position
- Any required modifications or accessories

Selection Factors:

Correct application of a gearmotor requires consideration of the following factors:

1. Type of load, reversing, amount of shock, duty cycle, etc. Reference Table 2.
2. The point of application of the load, if overhung.
3. Possibility of stalling.
4. Retarding torque of brake
5. Size of flywheel if used or WK2 or inertia effect of the load.
6. Surrounding conditions, normal, dusty, outdoor, hazardous vapor or dust, moisture, or acid or alkali fumes, or abnormal ambient temperatures
7. Mounting: floor, ceiling, vertical or inclined. Reference mounting position charts

8. Electrical characteristics of the motor
9. Complete duty cycle
10. Horsepower or torque required
11. Output shaft RPM
12. Type of transmission: direct connected, sprocket and chain, pinion and gear, V-belt or flat belt.

Table 1: AGMA Gear Classification

Prime Mover	Duration of Service per Day	Driven Machine Loads		
		Uniform	Medium Stock	Heavy Stock
Class I				
Electric Motor	Occasional 1/2 Hour	I	I	I
	Intermittent 2 Hours	I	I	II
	10 Hours	I	II	III
	24 Hours	II	III	III
Electric Motor with Frequent Starts/Stops	Occasional 1/2 Hour	I	I	II
	Intermittent 2 Hours	I	II	III
	10 Hours	II	III	III
	24 Hours	III	III	III

□ See Table 2 for explanation

Table 2: AGMA Load Classification

Class	Definition	Equiv Service Factor
I	Steady loads not exceeding normal rating of the motor and 8 hours a day service. Moderate shock loads where service is intermittent	1.0
II	Steady loads not exceeding the normal rating of the motor for 24 hours a day. Moderate repetitive shock loads for 8 hours a day.	1.4
III	Moderate repetitive shock loads for 24 hours a day. Heavy repetitive shock loads for 8 hours a day	2.0

XL Right Angle Reducers and Gearmotors

In addition to HP and output speed, MASTER XL Reducers and Gearmotors are identified by a series of numbers and letters as follows:

140 W M 21 A 30 K1

MOTOR FRAME

Motor Frames 56 through 215T are preselected in selection tables.

TYPE OF GEAR TRAIN

W - Single reduction worm Right Angle gearing
C - Double reduction worm/helical Right Angle gearing

TYPE OF GEAR UNIT

G - Gearmotor
M - C-face Reducer
R - Shaft Input Reducer (CR40A and WR40A only)

GEAR UNIT SIZE

12 = 1.5" Center Distance Worm Stage
16 = 2" Center Distance Worm Stage
21 = 2.62" Center Distance Worm Stage
28 = 3.5" Center Distance Worm Stage
419 = 4.19" Center Distance Worm-type Only
40 = 5.0" Center Distance Worm Stage

GEAR UNIT MOUNTING

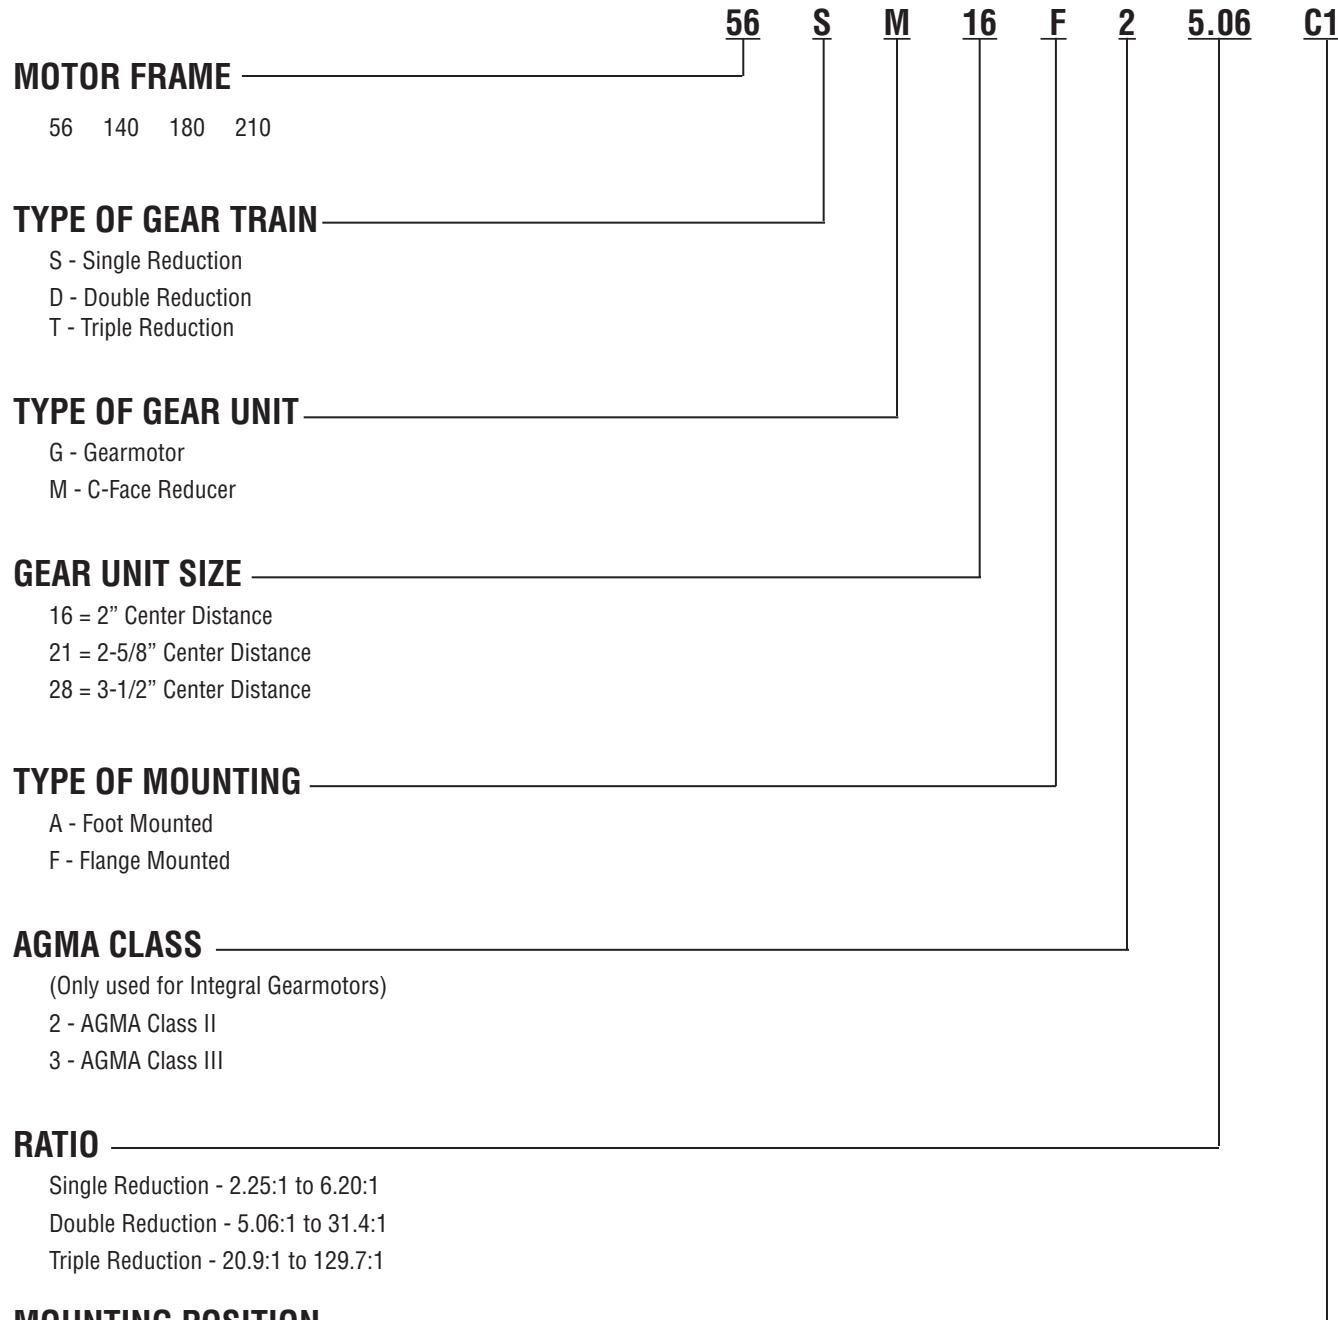

A - Integrally cast foot
B - Multimount
F - Footless Flanged Gearcase
J - J Mount

MOTOR INFO: TE 1750 RPM, 3 PHASE, 60 HZ 230/460 VOLTS, PREMIUM EFFICIENT
Output shaft OHL in pounds at one shaft diameter from shaft shoulder.

* Made to Order

NOTE: Multi-Mount foot may also be specified for positions shown in Integrally Cast Foot.

INCLINED MOUNTING

All of the mounting positions shown are suitable for mounting up to = 5° from the vertical or horizontal axis, without changing oil vent, level and drain plugs. If mounting angle exceeds 5°, specify when ordering such that the oil plugs can be repositioned for proper operation.

- Countershaft is located on the concealed side of these units.

Note: Dotted Boxes show capacitor and/or conduit box locations when supplied as standard construction.

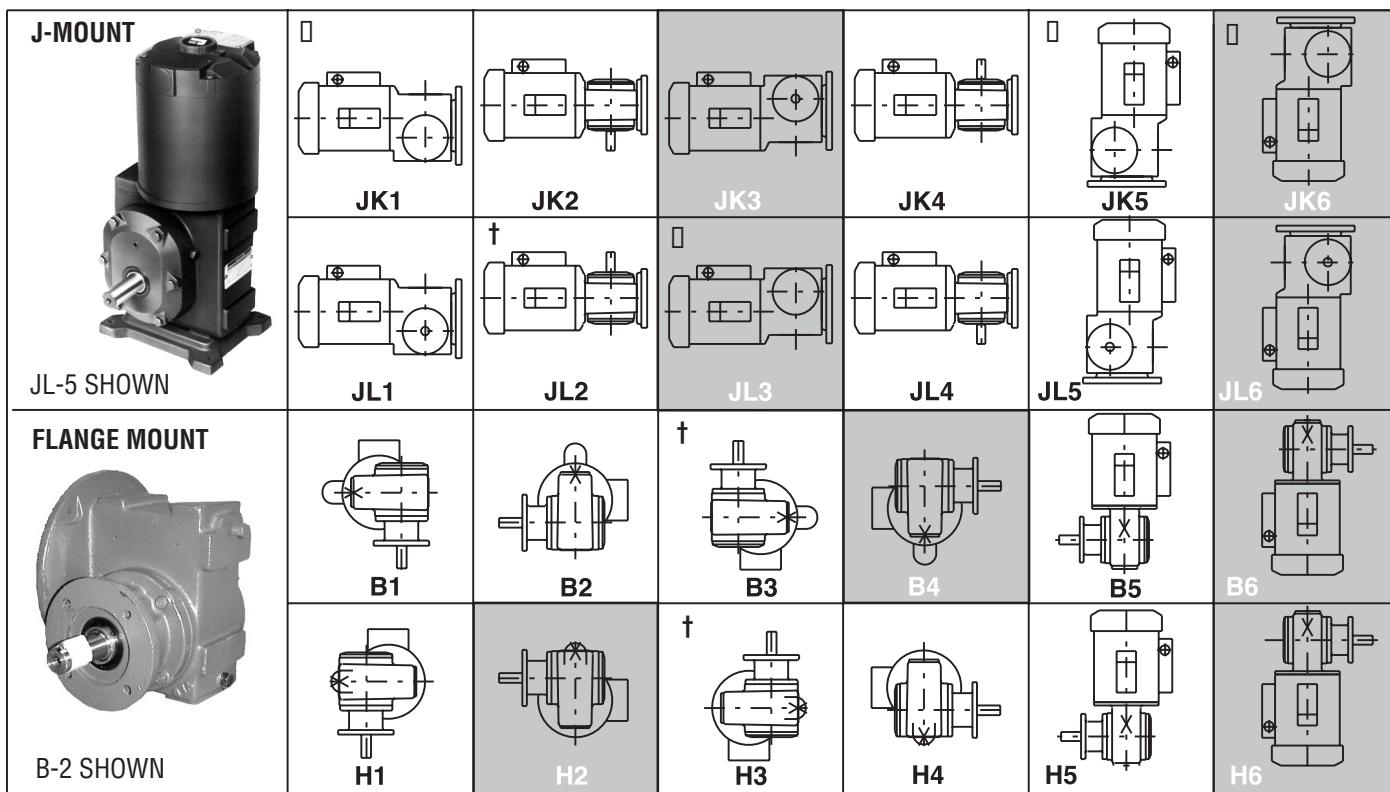

† Not available in CG40 case

X Reference Surface

NOTE: Also available as KL (double output shaft extends from both sides of case)

Note: Shaded boxes indicate mounting not recommended. These should be avoided. Use of product in positions not recommended negates time-in-use warranty.

XL Right Angle

INCLINED MOUNTING

All of the mounting positions shown are suitable for mounting up to = 5° from the vertical or horizontal axis, without changing oil vent, level and drain plugs. Be sure to specify when ordering, if angle of mounting is known to exceed = 5° such that the oil plugs can be repositioned for proper operation.

□ Countershaft is located on the concealed side of these units.

Note: Dotted Boxes show capacitor and/or conduit box locations when supplied as standard construction.

† Not available in CG40 case

XL Reducers and Gearmotors MODIFICATIONS AND ACCESSORIES

BRAKES

Standard brakes are fail-safe type, spring set and electrical release. Designed for holding and intermittent braking.

Also available: add-on brakes and double-C-face brake modules. Most ratings are available from stock. Ratings not stocked can be ordered at standard production lead times.

CLUTCH/BRAKE MODULES

Where frequent starting or stopping is required or where it is desirable to disconnect the motor from the reducer, double-C-face clutch/brake modules (mounted between C-face motor and gearbox C-face input flange) are available. These modules are not fail-safe, as electrical power is required to operate both the clutch and the brake. Open enclosure.

The gearbox must have a minimum 1.5 service factor to compensate for the shock developed during starts/stops of clutch/brake operation.

Double-C-face modules with clutch only and brake only are also available.

EASY CLEAN

MASTER XL EASY CLEAN gearmotors are designed to meet the requirements of food processors, canners, meat packers, bakeries, dairies, drug and cosmetic manufacturers.

EASY CLEAN gearmotors feature smooth, corrosion resistant frames and end shields, easily removable fan covers and fans, corrosion proof hardware and no exposed threads or pockets which are hard to clean or not self-draining. These gearmotors may be used in either "wet" or "dry" areas and are cleanable by dry methods or washdown. EASY CLEAN gearmotors are recommended for use in bakeries, dairy processes, ice cream plants, confectionery plants, pharmaceutical and vitamin manufacturing, cosmetic plants, beverage and bottling plants, canneries and any other application requiring this special construction.

Some EASY CLEAN fractional horsepower ratings are also available in special totally enclosed, non-fan-cooled construction, featuring a smooth exterior and epoxy treated windings suitable for both wet and dry locations. The gearmotor is readily cleanable without removing the fan cover or fan. While corrosion resistant to a large degree and suitable for detergent washdown, these gearmotors are better suited for applications where ease of cleaning is of utmost importance and air movement is objectionable.

MOTORS

Standard motor construction in the XL product line is partial gearmotor construction. C-face adapters are available for mounting C-face motors. Special designs and enclosures are available. Consult MASTER Customer Service with your requirements.

RING TACHOMETER

Kit consists of ring tachometer with special three-piece coupling and mounting hardware. Mounts between C-face motor and C-face adapter. Note: Motors are shipped separately when these kits are supplied with C-face reducers.

FOOD-GRADE LUBRICANT

Chevron FM460X available. USDA class AA and H1.

SPECIAL LUBRICANTS

Available for low temperatures.

SIGHT GAGES (OIL LEVEL)

Available for all MASTER XL reducers. Parallel reducers require revised venting for this modification. Gages shipped separately to prevent shipping damage. Customer installation required.

SPECIAL MOUNTINGS

- Flange
- J-Mount
- Multi-Mount

Refer to Dimension and Mounting Positions pages.

SPECIAL PAINT

Contact MASTER Customer Service.

SPECIAL SHAFTS

Special output shaft extensions are available and considered on an individual basis. Limited to diameters equal to or smaller than standard shaft. Consult MASTER Customer Service.

XT (EXTRA TOUGH) PACKAGE

Modifications to make gearbox suitable for use outdoors or in chemical, dairy or food processing plants or other locations with high humidity, steam, chemical fumes, etc. or where gearmotor is washed frequently. Features cast-iron construction, stainless steel nameplate, soft copper washers, brass lubrication fittings, brass spring-loaded vent, double lip output shaft seal and stainless steel output shaft seal sleeve.

XL Parallel Reducers and Gearmotors

INSTALLATION:

Proper installation of MASTER XL parallel speed reducers and gearmotors will insure reliable service and maximum life. Key items to minimize possible failures include:

- **Gear Case Mounting** - To insure uniform pressure mount gear case on flat surface. Use uniform torque when mounting bolts are tightened.
- **Shaft Overhung Loads** - Excessive overhung loads due to over tightening of belts or chains can result in broken shafts and reduce bearing life or failure.
- **Couplings** - Improper coupling alignment can result in excessive stresses on gear unit shaft and bearings
- **Shock Loads** - Excessive shock loads can also result in damaging stresses on shafting and bearings.

LUBRICATION:

Proper lubrication of MASTER XL speed reducers is extremely important if long trouble-free operation is to be expected. Proper lubrication consists of:

- Use of proper type and grade of lubricant
- Maintenance of correct oil level
- Drain, flush and refill at the required intervals

MASTER XL speed reducers and gearmotors have been lubricated at the factory for the K1/L1 mounting position. Before starting, check the mounting position diagrams to make sure that the oil level plug and oil level are in the correct location for which the unit is to be operated. This is extremely important, as insufficient lubricant will damage gears and bearings in a very short time. If any change is necessary, require relocation of the level plug and adding or draining lubricant to insure the proper amount of lubricant is required. The correct amount of oil is important to the performance of a speed reducer. Each **MASTER XL** speed reducer or gearmotor has a red oil level plug which indicates the proper oil mounting level for a given mounting position. Check the oil level plug location diagrams in the Installation and Instruction Manuals available on www.master-pt.com.

RECOMMENDED LUBRICANTS:

Use only the best grade of automotive engine lubricants, unless otherwise specified. Where gear units are used outdoors, seasonal changes may be necessary. It is impossible to select one gear lubricant of petroleum origin which is usable over a wide range of temperatures. Use lubricants of the proper group as required by the ambient temperature in which the reducer will operate. The proper grade of oil is listed as follows:

Ambient (Room) Temp.	SAE Grades of Oil For Output Shaft Speeds (in RPM) of:			
	13.5 - 500	501 - 1000	1001 - 3000	3000 +
110°F to 165°F	50 (1)	40	30	20W
60°F to 110°F	40	30	20W	10W
35°F to 70°F	30	20W	10W	10W
10°F to 40°F	20W	10W	10W	---
-10°F to 20°F	10W (2)	(2) (3)	---	---
-30°F to 10°F	(2) (3)	(2) (4)	---	---
-65°F to -20°F	(2) (4)	---	---	---

(1) Use SAE 50 heavy duty automotive oil with oxidation inhibitor

(2) Use Gulf Paramount Number 22 (A naphthenic base oil with a low pour point and viscosities of 109.8 SUS @ 100°F or 39.1 SUS @ 210°F.) Any other oil meeting these specifications would be a suitable substitute.

(3) Use Mobil Oil Co. Avrex number 903.

(4) Special oil seals are required for temperatures below 10°F.

MAINTENANCE:

Periodic changing of lubricant is important for maximum reducer or gearmotor performance. Lubricant should be drained and refilled after the first 250 hours of operation; then every 1500 hours or six months thereafter, whichever occurs first.

In addition to lubrication and installation, regular inspection to insure tightness of bolts and screws, correct alignment of shaft couplings, no major oil leaks, no excessive heating and no unusual vibration or noises will guarantee maximum performance and life of your **MASTER** product.
